# COBI MSV

The modern standard for the pharmaceutical trade

In the pharmaceutical industry, drug orders between pharmacies and pharmaceutical wholesalers or suppliers are mapped electronically using the ERP solution from SAP Business One and pharmacy software. The MSV3 data interface is the general technical standard for the ordering process and offers direct communication between all market partners involved.

COBI.msv maps version 2 of this standard and makes it possible to accept orders in MSV3 format and convert them into an SAP Business One sales order. MSV3-Functions such as authentication and availability requests are realized by queries to SAP Business One, so no intermediate database is required.

COBI.msv is based on the MSV3 standard and thereby forms the optimal interface between a pharmacy software and the ERP solution of SAP Business One. Thus, pharmacies working with awinta or PROKAS, for example, can transfer orders to you digitally.

Features of COBI.msv

» Customer Authentication
» Availability requests
» Order transfer
» Order confirmation
» E-mail Notification via incoming orders
» Electronic delivery notification
» Return offers

Your benefits at a glance

» Commissioning within one day
» Based on the latest industry-standard
» Supports SAP Business One On-Premise, Partner-Hosted and SAP-Hosted in the SQL and HANA version
» No additional intermediate database
